Comments

*A rack was moved into L50 from room L42 after sentinels were sampled but before results had been received. This rack proved to be positive for MPV and MMV. Colony animals were tested, and a cage positive for MMV was found and euthanized. Both rooms were quarantined until the next round of quarterly testing had been completed and was negative.

**Several racks from L50 were moved, along with their sentinels, to newly opened room L09, resulting in fewer racks and sentinels to be tested this
